

Horsetail

by Katell and Amran

Horsetail is a waterfall located in the park of Yosemite in California. It is the most beautiful and the most special. The phenomenon is very rare because the waterfall has the color of fire between the fifteen final days of February.

The event lasts one to twelve minutes.

The water flows 610 meters down.

The beach of Maldives

In the Maldives, the sea shines at the night. The phenomenon is caused by a very very little crustacean of 3 millimeters whose name is *Vargula hilgendorffii* or sea firefly. The animal lives in the sand around one month. It produces luciferine. The fluid become luminous at the touch of air. You can observe the same thing in Okoyama in Japan.
